

XM radio is a great invention that deserves broad support from the government. XM has made a huge investment to bring "cable radio" to your car, and they deserve the right to gain a return on investment. Stop the NAB from using the government to squelch competition!

The NAB does not offer the channel choice, the constant weather and traffic (which increases safety as the traffic and weather is a CONSTANT feed not a once every fifteen minutes deal as on regular radio), and the fun of having 100 channels in your car. Vote for XM and against the NAB!!!!
